

M.Tech. Programme in Mechanical Engineering
Mechanical Engineering Department, IIT Patna

	Courses	Credits	Total
Semester I	Core Theory courses (3-0-0-6) : 2 Elective Theory courses (3-0-0-6): 3 ME Lab : I (0-0-3-3) HSS Elective (2-0-0-4)	2×6 = 12 3×6 = 18 3 4	37
Semester II	Core Theory courses (3-0-0-6) : 2 Elective Theory courses (3-0-0-6): 3 ME Lab : II (0-0-3-3) Seminar (0-0-4-4)	2×6 = 12 3×6 = 18 3 4	37
Semester III	Project phase I (24)	24	24
Semester IV	Project phase II (24)	24	24

Total credit = 122

Name of courses

- **Core Courses**

1. MH503: Advanced Engineering Mathematics (3-0-0-6)
2. ME519: Advanced Engineering Software Lab (1-0-4-6)
3. ME521: Advanced Fluid Mechanics (3-0-0-6) for *Thermo-Fluids* stream
4. ME523: Advanced Dynamics & Vibration (3-0-0-6) for *Solid Mechanics & Design* stream
5. ME525: Metal Cutting & Analysis (3-0-0-6) for *manufacturing* stream
6. ME522: Advanced Heat Transfer(3-0-0-6) for *Thermo-Fluids* stream
7. ME524: Theory of Elasticity (3-0-0-6) for *Solid Mechanics & Design* stream
8. ME526: Metal Forming & Analysis (3-0-0-6) for *manufacturing* stream

- **Lab & Seminar Courses**

- ME529: Thermo-Fluids Lab-I (0-0-3-3) for *Thermo-Fluids* stream
ME531: Manufacturing Lab I (0-0-3-3) for *manufacturing* stream
ME538: Solid Mechanics & Design Lab-I (0-0-3-3) for *Solid Mechanics & Design* stream
ME530: Thermo-Fluids Lab-II (0-0-3-3) for *Thermo-Fluids* stream
ME532: Manufacturing Lab II (0-0-3-3) for *manufacturing* stream
ME539: Solid Mechanics & Design Lab-II (0-0-3-3) for *Solid Mechanics & Design* stream
MH507: Seminar (0-0-4-4)

ME603: Project phase I
 ME604: Project phase II

• **Electives I-III**

A student should select three courses from three different groups. If there is no appropriate course in the department, he can choose course from other department

Group A	ME503: Computational Fluid Dynamics ME504: Vehicle Dynamics and Multi-body Systems
Group B	ME533: Finite Element Analysis ME535: Acoustics
Group C	ME742: Advanced Manufacturing Processes ME501:Robotics: Advanced Concepts & Analysis ME581: Bio Mechanics and Bio Mechatronics ME537: Refrigeration and Air-Conditioning

• **Electives IV-VI**

A student should select three courses from three different groups. If there is no appropriate course in the department, he can choose course from other department

Group A	ME 542: Aerodynamics ME512: Mobile Robotics ME534: Wear & Lubrication of Machine Components ME506: Emerging Smart Materials for Mechatronics Applications ME502: Industrial Automation
Group B	ME546: Multiphase Flow & Heat Transfer ME554: Rotor Dynamics
Group C	ME541: Turbulent Shear Flow ME536: Non-linear Systems Dynamics

Detailed Syllabus
 (Core courses)

MH503: Advanced Engineering Mathematics

(3-0-0-6)

Prerequisite NIL

Linear Algebra: Matrix algebra; basis, dimension and fundamental subspaces; solvability of $Ax = b$ by direct Methods; orthogonality and QR transformation; eigenvalues and eigenvectors, similarity transformation, singular value decomposition, Fourier series, Fourier Transformation, FFT. Vector Algebra & Calculus: Basic vector algebra; curves; grad, div, curl; line, surface and volume integral, Green's theorem, Stokes's theorem, Gauss-divergence theorem. Differential Equations: ODE: homogeneous and non-homogeneous equations, Wronskian, Laplace transform, series solutions, Frobenius method, Sturm-Liouville problems, Bessel and Legendre equations, integral

transformations; PDE: separation of variables and solution by Fourier Series and Transformations, PDE with variable coefficient.

Numerical Technique: Numerical integration and differentiation; Methods for solution of Initial Value Problems, finite difference methods for ODE and PDE; iterative methods: Jacobi, Gauss-Siedel, and successive over-relaxation.

Complex Number Theory: Analytic function; Cauchy's integral theorem; residue integral method, conformal mapping.

Statistical Methods: Descriptive statistics and data analysis, correlation and regression, probability distribution, analysis of variance, testing of hypothesis.

Text Books:

1. H. Kreyszig, "Advanced Engineering Mathematics", Wiley, (2006).
2. Gilbert Strang, "Linear Algebra and Its Applications", 4th edition, Thomson Brooks/Cole, India (2006).
3. J. W. Brown and R. V. Churchill, "Complex Variables and Applications", McGraw-Hill Companies, Inc., New York (2004).
4. J. W. Brown and R. V. Churchill, "Fourier Series and Boundary Value Problems", McGraw-Hill Companies, Inc., New York (2009).
5. G. F. Simmons, "Differential Equations with Applications and Historical Notes", Tata McGraw-Hill Edition, India (2003).
6. S. L. Ross, "Differential Equations" 3rd edition, John Wiley & Sons, Inc., India (2004).
7. K. S. Rao, "Introduction to Partial Differential Equations", PHI Learning Pvt. Ltd (2005).
8. R. Courant and F. John, "Introduction to Calculus and Analysis, Volume I and II", Springer-Verlag, New York, Inc. (1989).

ME 521 Advanced Fluid Mechanics

(3-0-0-6)

Concepts of fluids: Definitions of fluids, concept of continuum, different types of fluid, tensor analysis, governing laws of fluid mechanics in integral form, Reynold's transport theorem, mass, momentum and energy equations in integral form and their applications, differential fluid flow analysis, continuity equation, Navier-Stokes equation and exact solutions. Potential flow analysis: Two-dimensional flow in rectangular and polar coordinates, continuity equation and the stream function, irrotationality and the velocity potential function, complex potential function, vorticity and circulation, flow over immersed bodies and D' Alembert's paradox, aerofoil theory and its application. Viscous flow analysis: Low Reynold's number flow, approximation of Navier-stokes equation, approximate solutions of Navier-Stokes equation, Stokes and Oseen flows, hydrodynamic theory of lubrication, Prandtl's boundary layer equations, Large Reynold's number flow approximation, flow instabilities and onset of turbulence. Compressible fluid flow: One dimensional isentropic flow, Fanno and Rayleigh flows, choking phenomenon, normal and oblique shocks. Micro and nano flow: Physical aspects of micro and nano flows, governing equations, surface tension driven flows, modeling of micro and nano flows.

Text Books:

1. White, F.M., Viscous Fluid Flow, McGraw-Hill, New York, 3rd edition 2006.
2. Bachelor G. K. An introduction to Fluid Dynamics , Cambridge University Press, 2007.
3. Streeter V.L. and Wylie E. B., Fluid Mechanics , Tata McGraw-Hill, Delhi 2001.
4. Shames I. H., Mechanics of Fluids , Tata McGraw Hill, Delhi, 4th edition 2003.
5. Douglas and Swaffield, Fluid Mechanics , Prentice Hall, 5th edition 2006.
6. Yahya S. M., Fundamentals of Compressible Flow , Tata McGraw Hill, Delhi, 3rd edition 2003.
7. Karniadakis G., Beskok, A., and Narayan A. Microflows and Nanoflows , Springer, 1st edition 2005.
8. Journal of Fluid Mechanics, Cambridge University Press.
9. Physics of Fluids , , American Institute of Physics.

ME523 Advanced Dynamics and Vibration**(3-0-0-6)**

Review of Newtonian mechanics for rigid bodies and system of rigid bodies; coordinate transformation between two set of axes in relative motion between one another; Euler angles; angular velocity, angular acceleration, angular momentum etc. in terms of Euler angle parameters; Newton-Euler equations of motion; elementary Lagrangian mechanics: generalized coordinates and constraints; principle of virtual work; Hamilton's principle; Lagrange's equation, generalized forces. Lagrange's equation with constraints, Lagrange's multiplier. Nonlinear effects in Dynamics. Review of the single DOF system and simple Multi-DOF lumped parameter systems. Equations of motion for free and forced vibration of distributed parameter systems: axial vibration of a bar, transverse vibration of a string, torsional vibration of a shaft, transverse vibration of beams. Boundary-value problem and boundary conditions. Differential eigenvalue problem, eigenfunction and natural modes. Orthogonality of eigenfunctions and expansion theorem. Rayleigh quotient. Response to initial conditions and external excitations. Discretization of distributed parameter system: Algebraic eigenvalue problem, eigenvalue and eigenvectors. Introduction to Modal analysis.

Text Books:

1. H. Baruh, Analytical Dynamics, McGraw-Hill (1999).
2. L. Meirovitch, Methods of Analytical Dynamics, Dover Publication, 2010.
3. D.T. Greenwood, Principles of Dynamics, Prentice-Hall International, 1988.
4. A.A. Shabana, Dynamics of Multibody Systems, 4th Cambridge University Press, 2013.
5. L. Meirovitch, Fundamentals of Vibration, McGraw Hill, 2000.
6. W.T. Thompson, M.D. Dahleh, C. Padmanabhan, Theory of Vibration with Application, 5th Ed., Pearson, 2008.
7. S.S. Rao, Mechanical Vibration, 4th Ed., Pearson, 2004.
8. W. Weaver, Jr., S.P. Timoshenko, D.H. Young, Vibration Problems in Engineering, 5th Ed., John Wiley and Sons, 1990.

ME525 Metal Cutting and analysis**(3-0-0-6)**

Single and multipoint tool geometry (ASA, ORS, NRS, MRS), conversion of tool angles; mechanics of chip formation (for ductile and brittle materials): Levy Lodes' theorem, fracture mechanics; Orthogonal and oblique cutting mechanics; dynamometry (strain gauge, piezo etc); Surface roughness in machining; Thermal aspects of machining; tribology in metal cutting; tool coatings and coating techniques; Economics of machining; Machinability; Cutting fluids: properties, types, application techniques, emissions and its adverse effects; Chip breaker; Recent advances in machining: hard turning, high speed machining, diamond turning, machining of advanced materials, machining with minimum quantity cutting fluids and cryogenic fluids; Grinding: mechanics, forces, specific energy, temperature, wheel wear and surface finish; Broaching: mechanics;

Text Books:

- [1] M. C. Shaw, Metal Cutting, Tata McGraw Hill, New Delhi, 2004.
- [2] M. C. Shaw, Principles of Abrasive Processing, Oxford University Press, 1996. [3] Bhattacharyya, A., Metal cutting: theory and practice, New Central Book, Kolkata, 1984.
- [4] G. K. Lal, Introduction to Machining Science, New Age International Publishers, 2007.

ME519 Advanced Engineering Software Laboratory**(1-0-4-6)**

CAD/CAM: 2D and 3D geometric transformation, Composite Transformation, Projections; Curves: Cubic, Bezier, Splines; Surfaces: Quadric, Coons patch, Super Quadric, Bezier, B-Splines. Process planning, CL data generation, Automatic CNC code generation.

FEM: Solid model creation, different types of elements, chunking of model, meshing, mesh quality, different kinds of analysis : static, dynamic, transient, thermal, electro-magnetic, acoustics, sub-structuring and condensation, Error and convergence.

Non-linear static and dynamic analysis, contact analysis, multi-physics problem, rigid body analysis of flexible element.

CFD: Different types of CFD techniques, various stages of CFD techniques (i) pre processor: governing equations, boundary conditions, grid generation, different discretization techniques (ii) processor: solution schemes, different solvers (iii) post-processing: analysis of results, validation, grid independent studies etc. Developing codes using commercial/open source software for solving few problems of laminar and turbulent flow with heat transfer applications.

Engineering softwares related to CAD/CAM, FEM, CFD, with both GUI and script like languages, are to be used for laboratory assignments.

Text Books:

1. D. F. Rogers and J. A. Adams, “Mathematical Elements for Computer Graphics”, McGraw-Hill, 1990
2. M. Groover and E. Zimmers, “CAD/CAM: Computer-Aided Design and Manufacturing”, Pearson Education, 2009.
3. A. Saxena and B. Sahay, “Computer Aided Engineering Design”, Springer, 2007.
4. J. N. Reddy, “An Introduction to Finite Element Methods”, 3rd Ed., Tata McGraw-Hill, 2005.
5. J. Fish, and T. Belytschko, “A First Course in Finite Elements”, 1st Ed., John Wiley and Sons, 2007.
6. J. D. Anderson, “Computational Fluid Dynamics”, McGraw-Hill Inc. (1995).
7. H. K. Versteeg and W. Malalaskera, “An Introduction to Computational Fluid Dynamics”, Dorling Kindersley (India) Pvt. Ltd. (2008).
8. S. Biringen and C Chow, An Introduction to Computational Fluid Mechanics by Example

ME522 Advanced Heat Transfer

(3-0-0-6)

Conduction: Equations and boundary conduction in different coordinate systems; Analytical Solutions: separation of variables, Laplace Transform, Duhamel’s theorem: Non-impulse initial conditions; Numerical Methods: Finite difference and flux conservation; Interfacial heat transfer. Convection: Conservation equations and boundary conditions; Heat transfer in laminar developed and developing boundary layers: duct flows and external flows, analytical and approximate solutions, effects of boundary conditions; Heat transfer in turbulent boundary layers and turbulent duct flows; Laminar and turbulent free convection, jets, plumes and thermal wakes, phase change. Radiation: Intensity, radiosity, irradiance, view factor geometry and algebra; formulations for black and non-black surfaces, spectrally-selective surfaces (solar collectors); Monte Carlo methods for radiation exchange; The radiative transfer equation, extinction and scattering properties of gases and aerosols, overview of solution methods and applications. Interaction between conduction, convection and radiation: Coupled problems; Examples in manufacturing and electronic cooling applications; Micro channels and micro fins.

Text Books:

ME524 Theory of Elasticity

(3-0-0-6)

Stress and strain tensors, equations of equilibrium and compatibility in rectangular and curvilinear coordinates, Cauchy's formula, stress transformation, principal stresses, Lamé's stress ellipsoid, Cauchy stress quadratic, octahedral stress, stress-strain relations, basic equations of elasticity, Boundary value problem, Uniqueness of solutions, Torsion of non-circular sections, St. Venant's theory of torsion, Scalar and Vector potentials, Strain potentials. Plane state of stress and strain, Airy's stress function for problems, Representation of biharmonic function using complex variables, Kolosoff-Mushkelishvili method. Thermal stress, Applications to problems of curved beam, thick cylinder and rotating disc, stress concentration. Introduction to numerical methods in elasticity. Contact problems, energy and variational principles Theory of Elasticity:

Text Books:

1. S.P. Timoshenko and J.N. Goodier, Theory of Elasticity, Tata McGraw-Hill, 2010.
2. L.S. Srinath, Advanced Solid Mechanics, Tata McGraw-Hill, 2002.
3. I.S. Sokolnikoff, Mathematical Theory of Elasticity, 2nd Ed., McGraw-Hill, 1956.
4. Y.C. Fung, Foundations of Solid Mechanics, Prentice-Hall, 1965.

ME526 Metal Forming and Analysis

(3-0-0-6)

Stress-strain relations in elastic and plastic deformations, Yield criteria for ductile metals, Work hardening and Anisotropy in yielding, Flow curves, Elements of theory of plasticity, Formulation of plastic deformation problems, Application of theory of plasticity for solving metal forming problems using slab method, Upper and lower bound methods, slip line field theory, Effects of temperature and strain rate in metal working, Friction and lubrication in cold and hot working, Technology and Analysis of important metal forming processes—Forging, Rolling, Extrusion, Wire Drawing, Sheet metal forming processes like Deep drawing, Stretch forming, Bending, Introduction to Finite Element Analysis of metal forming processes.

Texts Books:

- [1] R.H Wagoner, Metal Forming Analysis, Cambridge University Press
- [2] G. W. Rowe, Principles of Industrial Metal working processes, CBS publishers and Distributors
- [3] B. L. Juneja, Fundamentals of Metal forming processes, New age international publishers
- [4] A. Ghosh and A. K. Malik, Manufacturing Science, East West Press
- [5] J. Chakrabarty, Theory of Plasticity, McGraw Hill, 1998.
- [6] Dieter, Mechanical Metallurgy, McGraw Hill. Inc
- [7] By William F. Hosford, Robert M. Caddell, Metal Forming: Mechanics and Metallurgy, Cambridge University Press

Lab Courses

ME538 Solid Mechanics & Design Lab-I

(0-0-3-3)

- 1) Measurement of Mode I fracture toughness of an Aluminum alloy and PMMA using a compact tension (CT) specimen.
- 2) Measurement of fatigue crack growth and determination of Paris law parameters for an Aluminum alloy using a CT specimen.
- 3) Measurement of strains using strain gauges.
- 4) Determination of ductile to brittle transition temperature of Mild Steel and Aluminum using Charpy Impact Testing Machine.
- 5) Torsion of bars of non-circular cross-section.
- 6) Measurement of stress concentration factor in a specimen with holes using photo elasticity method.
- 7) Observation of mode shapes and measurement of natural frequencies of vibration of a circular plate.

- 8) Detection of location and size of crack in a cracked beam using deflection measurement method.
- 9) Scanning Electron Microscopy examination of fracture surfaces of specimens fractured in experiment nos. 1), 2) and 4) above.

Texts Books:

- 1 Holman J.P., Experimental Methods for Engineers, McGraw Hill Series in Mechanical Engineering, ISBN-10: 0073529303, 8th Editions, 2011.
- 2 Doebelin E.O., Measurement systems- Applications and Design, 4e, Tata McGraw-Hill, 1990
- 3 Dally, Riley, and McConnell, Instrumentation for engineering measurements, 2e, John Wiley & Sons., 1993
- 4 Figiola, R.S. and Beasley, D.E., Theory and design for mechanical measurements, 2(e), John Wiley, 1995

ME539 Solid Mechanics & Design Lab-II

(0-0-3-3)

- 1) DAQ and its components, feedback motion control of DC motor, low pass and high pass filters, spectrum analysis.
- 2) Fault Detection in Rotating Machinery.
- 3) Electrical motor current signature analysis on Machine Fault Simulator
- 4) Experimental investigation of Oil whirl-Oil whip in Machine Fault Simulator
- 5) Study of Air Bearing apparatus and its onset whirl
- 6) Experimental investigation of Rider's comfort through Active mass suspension
- 7) To determine the frequency response function of a Cantilever Beam
- 8) To measure the sound pressure level of shop floor/machine with different weighting scale and validation of inverse proportionality law
- 9) Dynamic Balancing (on MFS) and Field balancing of Rotating machinery
- 10) Experimental setup built by students themselves / a precursor to M-Tech. project.

Texts Books:

1. Beckwith T. G., Marangoni, R. D., and Lienhard, J. H., Mechanical Measurements, 5e, Addison Wesley, 1993.
2. Dally, Riley, and McConnell, Instrumentation for engineering measurements, 2e, John Wiley & Sons., 1993
3. Figiola, R.S. and Beasley, D.E., Theory and design for mechanical measurements, 2(e), John Wiley, 1995

ME531 Manufacturing Laboratory I

(0-0-3-3)

Determination of chip reduction coefficient, fabrication single point cutting tool, re-sharpening of twist drill, cutting force measurement using DAQ and Labview, measurement of cutting temperature using DAQ and Labview, estimation of tool life, optimal design of chip breaker, study on Machinability

Texts Books:

1. Bhattacharyya, A., Metal cutting: theory and practice, New Central Book, Kolkata, New Edition

ME532 Manufacturing Laboratory II

(0-0-3-3)

Direct extrusion and indirect extrusion, effect of lubrication on die pressure and load, rolling, drawing, forging load estimation, sheet bending Estimation, deep drawing analysis, and Forming limit diagram, spinning, blanking and piercing operation.

Text/reference Books

1. G. W. Rowe, Principles of Industrial Metal working processes, CBS publishers and Distributors, New Edition

ME529 Thermal Fluid Laboratory

(0-0-3-3)

Fluid Mechanics: measurement of flow through Venturi, orifice, and hot wire anemometer, fluid machinery, and wind tunnel, Conduction: estimation of thermal conductivity and heat capacity, Convection: free and forced convective heat transfer coefficients on different geometries including fins, Heat Exchangers: single phase parallel and cross flow heat exchangers, heat transfer, Radiation heat transfer: Stefan-Boltzmann law, Kirchhoff's law, Lamberts Cosine law, Lamberts law of absorption, inverse square law, view factors, DAQ and Signal Processing: DAQ and its components, feedback temperature control, low pass and high pass filters, spectrum analysis.

Texts Books:

1. Holman J.P., Experimental Methods for Engineers, Mcgraw Hill Series in Mechanical Engineering, ISBN-10: 0073529303, 8th Editions, 2011.
2. Doebelin E.O., Measurement systems- Applications and Design, 4e, Tata McGraw-Hill, 1990
3. Dally, Riley, and McConnell, Instrumentation for engineering measurements, 2e, John Wiley & Sons., 1993
4. Figiolo, R.S. and Beasley, D.E., Theory and design for mechanical measurements, 2(e), John Wiley, 1995

ME530 Thermal Fluid Laboratory II

(0-0-3-3)

Phase Change Heat Transfer: pool boiling, Leidenfrost, flow boiling, dropwise condensation, film wise Condensation, Surface Tension and Capillarity: wettability and contact angles on hydrophilic, hydrophobic and super-hydrophobic surfaces using a micro-goniometer, Wilhelmy plate method, capillarity, droplet impingement on hydrophilic, hydrophobic and super-hydrophobic surfaces, Turbulence: jet and plumes, Solar Thermal: solar intensity measurement using a Pyranometer, estimation of emissivity using heat source, metal plates and IR camera, evaluation of a solar flat-plate collector system in thermosyphonic and forced flow modes at different radiation levels, inlet water temperature, wind speeds, flow rate, Flow Visualization and Analysis: smoke and dye based flow visualization, e-PIV, μ -PIV.

Texts Books:

1. Beckwith T. G., Marangoni, R. D., and Lienhard, J. H., Mechanical Measurements, 5e, Addison Wesley, 1993
2. Dally, Riley, and McConnell, Instrumentation for engineering measurements, 2e, John Wiley & Sons., 1993
3. Figiolo, R.S. and Beasley, D.E., Theory and design for mechanical measurements, 2(e), John Wiley, 1995

Elective Courses

ME503 Computational Fluid Dynamics

(3-0-0-6)

Concept of Computational Fluid Dynamics: Different techniques of solving fluid dynamics problems, their merits and demerits, governing equations of fluid dynamics and boundary conditions, classification of partial differential equations and their physical behavior, Navier-Stokes equations for Newtonian fluid flow, computational fluid dynamics (CFD) techniques, different steps in CFD techniques, criteria and essentialities of good CFD techniques.

Finite Difference Method (FDM): Application of FDM to model problems, steady and unsteady problems, implicit and explicit approaches, errors and stability analysis, direct and iterative solvers. Finite Volume Method (FVM): FVM for diffusion, convection-diffusion problem, different discretization schemes, FVM for unsteady problems.

Prediction of Viscous Flows: Pressure Poisson and pressure correction methods for solving Navier-Stokes equation, SIMPLE family FVM for solving Navier-Stokes equation, modelling turbulence.

CFD for Complex Geometry: Structured and unstructured, uniform and non-uniform grids, different techniques of grid generations, curvilinear grid and transformed equations.

Lattice Boltzman and Molecular Dynamics: Boltzman equation, Lattice Boltzman equation, Lattice Boltzman methods for turbulence and multiphase flows, Molecular interaction, potential and force calculation, introduction to Molecular Dynamics algorithms.

Text Books:

1. J. D. Anderson, "Computational Fluid Dynamics", McGraw-Hill Inc. (1995).
2. S. V. Patankar, "Numerical Heat Transfer and Fluid Flow", Hemisphere Pub. (1980).
3. K. Muralidhar, and T. Sundarajan, "Computational Fluid Flow and Heat Transfer", Narosa (2003).
4. D. A. Anderson, J. C. Tannehill and R. H. Pletcher, "Computational Fluid Mechanics and Heat Transfer", Hemisphere Pub. (1984).
5. M. Peric and J. H. Ferziger, "Computational Methods for Fluid Dynamics", Springer (2001).
6. H. K. Versteeg and W. Malalaskera, "An Introduction to Computational Fluid Dynamics", Dorling Kindersley (India) Pvt. Ltd. (2008).
7. C. Hirsch, "Numerical Computation of Internal and External Flows", Butterworth-Heinemann, (2007).
8. J. M. Jaile, "Molecular Dynamics Simulation: Elementary Methods", Willey Professional, 1997.
9. A. A. Mohamad, "Lattice Boltzman Method: Fundamentals and Engineering Applications with Computer Codes", Springer (2011).

ME537 Refrigeration and Air conditioning

(3-0-0-6)

Pre-requisites: Nil

Refrigeration

Refrigeration systems: Vapour compression, vapour absorption and air refrigeration system, Thermo-electric refrigeration, Cryogenics.

Refrigeration Hardware: Refrigerant compressors, refrigerant condensers, refrigerant evaporators, receiver, expansion devices, filter-drier, moisture indicator etc.

Refrigeration Controls: HP/LP cut-out, Solenoid valve, evaporator pressure regulator, Accumulators, Suction pressure regulator.

Capacity control techniques: Hot gas by-pass scheme, Cylinder loading scheme, suction gas throttling scheme

Refrigerants: Classification and nomenclature, desirable properties of refrigerants, common refrigerants, environmental issues-Ozone depletion and global warming

Alternative refrigerants: low GWP and zero ODP newer refrigerants.

Applications of Refrigeration: Industrial refrigeration, Transport refrigeration, food preservation (cold storage)

Air-conditioning

Review of Basic psychrometry: Sensible cooling/heating processes, humidification /dehumidification processes on psychrometric chart etc.

Classification of air-conditioners: unitary systems (Window type/self-contained/single-package unit), split-unit and Central air conditioning system

Cooling/Heating load calculations: Transmission load, Solar heat gain, Occupancy load, Equipment load, Infiltration and ventilation load.

Duct Design: Design considerations and procedures

Air Conditioning controls: basic elements, types of control systems

ME535 Acoustics

(3-0-0-6)

Acoustics: Objective-Understanding of Vibration, Sound, Noise. Mathematical basics for Acoustics-PDE, Vectors, divergence (Greens) theorem, Stokes theorem, Signal processing. Development of Wave equation, Helmholtz equation. Acoustic wave equation- Plane waves, Acoustic -Power, Intensity & measurement. Transmission, Absorption and attenuation of sound waves in fluids, Spherical Waves, monopole, dipole, quadropole and piston radiator. Radiation and Reception of Acoustic waves. Active sound control Pipes, Cavities, Waveguides, Resonators, Filters and Ducts-Plane Waves, energy dissipation, finite amplitudes and transmission phenomena, horn radiator, mufflers, silencers Noise, signal detection, hearings and Speech-Noise spectrum and band level, combining band levels and Tones, Detecting signal in noise, Detection threshold, Ear-Thresholds, Equal loudness level contours, Critical bandwidth, Masking Loudness level, Pitch and frequency Environmental Acoustics- weighted Sound levels, Speech interference, Criteria for Community noise Highway noise, Aircraft noise rating, Hearing loss, Legislations for Noise control Architectural acoustics, Reverberation time, Sound Absorption materials, Direct and Reverberant Live rooms,

Acoustic factors in design Transduction- transducers/transmitters- anti reciprocal, reciprocal. Loudspeakers, Microphones. Introduction to Underwater Acoustics.

Text Books:

- [1] Fundamental of Physical Acoustics, David T Black Stock, John Wiley & Sons, Inc
- [2] Noise and Vibration Control Engineering: Principles and Applications Leo L. Beranek , John Wiley & Sons, Inc
- [3] Handbook of Noise and Vibration Control edited by Malcolm J. Crocker, John Wiley & Sons, Inc., New York, 2007

ME536 Nonlinear System Dynamics

(3-0-0-6)

Introduction to Nonlinear Dynamical System: Linear vs. nonlinear behavior, Classification of nonlinear Systems, Examples of structural, fluid-mechanical and chemical/biological systems, Existence and uniqueness of solutions.

First-order nonlinear systems: Autonomous systems: Equilibrium points, linear systems, invariant sets, linearization, phase diagrams and velocity fields, behavior dependence on parameters, bifurcations of equilibria (saddle-node, pitchfork and transcritical), implicit function theorem. Nonautonomous systems.

Second-order nonlinear conservative/nonconservative systems: Phase plane analysis, equilibrium points, linearization, stability, periodic orbits and saddle points, potential function and phase portrait, parameter-dependent conservative systems, local bifurcations, examples of global bifurcations, effect of dissipative forces.

First-order system in the plane: General phase plane analysis, linearization, general solution for linear systems, classification of equilibrium points, limit cycles, Bendixon's criterion and Poincare Bendixon theorem. Point mapping techniques, exact transformations, and Poincare mappings.

One-dimensional linear and nonlinear mappings: Fixed points, linearization, stability, parameter-dependent mappings, bifurcations.

Perturbation and other approximate methods: Introduction to regular and singular perturbation expansions through algebraic and transcendental equations; roots of equations and dependence on parameters. Perturbation method for free oscillations, secular terms, frequency dependence on response, Poincare-Lindstedt technique for periodic solutions, Harmonic balance and Fourier series for periodic solutions. Averaging methods, amplitude and frequency estimates, slowly varying amplitude and phase ideas, self-excited oscillations. Multiple time-scale techniques. Forced oscillations, concept of a resonance, oscillations far from resonance, near resonances and strong and weak excitations, response near primary resonance, softening and hardening nonlinearities, Duffing's equation and primary and secondary resonances, forced response of self excited systems near resonance, frequency locking and entrainment.

General linear systems with constant and periodic coefficients: Concepts of stability (Lyapunov, Poincare, etc.), stability by linearization, boundedness of solutions, Mathieu's equation, transition curves and periodic solutions for Mathieu-Duffing system.

Relaxation oscillations: The van der Pol oscillator.

Multi degree of freedom systems: Examples, various types of resonances – external, internal, and combination, etc., response prediction using methods of averaging and multiple scales.

Some more on bifurcations, structural stability and chaos.

Experimental Demonstration: String ballooning motion. Fun with Cantilever beam of large deformation and other developed models. Electronic Circuit building. Numerical computation with Matlab/Mathematica.

ME534 Wear and Lubrication of Machine components

(3-0-0-6)

Course objectives: Surface failure due to rubbing is a critical problem that affects the life and reliability of modern machinery. The knowledge of surface interaction is interdisciplinary and essential to design for life and reliability and also enable innovation in electromechanical and material engineering design. The course focuses on theories of friction, wear, contact and lubrication, approaches to model basic tribological elements/systems, and methods to simulate tribological processes. Course content: Definition of Tribology, Significance for Maintenance and Reliability of machines, Terotechnology. Surface- roughness, materials, mechanics of surface/solid contacts Friction Laws of Friction, Mechanisms of Friction, Friction Space, Stiction, Stick Slip, Surface Temperature, surface energy, micro and nano scale viewsWear Adhesive Wear, Delamination Wear, Fretting Wear, Abrasive Wear, Erosive Wear, Corrosive Wear, Mild and Severe Oxidational Wear, Wear-Mechanism Maps, Stribeck Curve, Reciprocatory, Rotary, Rolling/sliding-HeathcoteLubrication- Regimes, Boundary Lubrication, Solid-Film Lubrication, Mixed Lubrication, Hydrodynamic Lubrication, Hydrostatic Lubrication, EHL, Lubrication in vacuum, Bearings- Rolling element, Step, Pad, Journal, Spiral groove, porous, air bearing, Gears, Cams, reciprocatory Lubricant-composition, basefluids, rheology, Additives- boundary layer. Nano additivesDynamic seals-Mechanical face seals, Rotary Lip seal, Elastomeric, Bushing, Labyrinth, applications of sealsNanoscale tribology Interatomic Interactions, Atomic Force Microscope (AFM), Challenges of Tribological Testing at Small Scales Tribological tests Friction, Wear, Life tests, Standards, Reciprocatory, Rotary, rolling/Sliding-spiral orbit, Dry and Lubricated tests, Scaling up subscale tests, component tests. Nano scale testsSurface engineering- coatings, modifications, repairMaterials-metals, polymer, ceramics for Tribological designCase Studies Sliding Contacts, Rolling Contacts, Bearing Design, Coating Selection. Electric Contacts, Microelectromechanical Systems (MEMS)

ME501 Robotics: Advanced Concepts and Analysis

(3-0-0-6)

Introduction to robotics: brief history, types, classification and usage and the science and technology of robots.

Kinematics of robot: direct and inverse kinematics problems and workspace, inverse kinematics solution for the general 6R manipulator, redundant and over-constrained manipulators.

Velocity and static analysis of manipulators: Linear and angular velocity, Jacobian of manipulators, singularity, static analysis.

Dynamics of manipulators: formulation of equations of motion, recursive dynamics, and generation of symbolic equations of motion by a computer simulations of robots using software and commercially available packages.

Planning and control: Trajectory planning, position control, force control, hybrid control
Industrial and medical robotics: application in manufacturing processes, e.g. casting, welding, painting, machining, heat treatment and nuclear power stations, etc; medical robots: image guided surgical robots, radiotherapy, cancer treatment, etc;

Advanced topics in robotics: Modelling and control of flexible manipulators, wheeled mobile robots, bipeds, etc. Future of robotics.

ME504: Vehicle Dynamics and Multi-body Systems

(3-0-0-6)

Introduction to vehicle dynamics: Vehicle coordinate systems; loads on axles of a parked car and an accelerating car. Acceleration performance: Power-limited acceleration, traction-limited acceleration.

Tire models: Tire construction and terminology; mechanics of force generation; rolling resistance; tractive effort and longitudinal slip; cornering properties of tire; slip angle; camber thrust; aligning moments.

Aerodynamic effects on a vehicle: Mechanics of airflow around the vehicle, pressure distribution, aerodynamic forces; pitching, rolling and yawing moments; crosswind sensitivity.

Braking performance: Basic equations for braking for a vehicle with constant deceleration and deceleration with wind-resistance; braking forces: rolling resistance, aerodynamic drag, driveline drag, grade, tire-road friction; brakes, anti-lock braking system, traction control, braking efficiency.

Steering systems and cornering: Geometry of steering linkage, steering geometry error; steering system models, neutral steer, under-steer, over-steer, steering ratio, effect of under-steer; steering system force and moments, low speed and high speed cornering; directional stability of the vehicle;

influence of front-wheel drive.

Suspension and ride: Suspension types—solid axle suspensions, independent suspensions; suspension geometry; roll centre analysis; active suspension systems; excitation sources for vehicle rider; vehicle response properties, suspension stiffness and damping, suspension isolation, active control, suspension non-linearity, bounce and pitch motion.

Roll-over: Quasi-static roll-over of rigid vehicle and suspended vehicle; transient roll-over, yaw-roll model, tripping.

Multi-body systems: Review of Newtonian mechanics for rigid bodies and system of rigid bodies; coordinate transformation between two set of axes in relative motion between one another; Euler angles; angular velocity, angular acceleration, angular momentum etc. in terms of Euler angle parameters; Newton-Euler equations of motion; elementary Lagrangian mechanics: generalised coordinates and constraints; principle of virtual work; Hamilton's principle; Lagrange's equation, generalized forces. Lagrange's equation with constraints, Lagrange's multiplier.

ME506: Emerging Smart Materials for Mechatronics Applications

(3-0-0-6)

Introduction: Smart materials and their application for sensing and actuation, Mechatronics aspects.

Piezoelectric materials: Piezoelectricity and piezoelectric materials, Constitutive equations of piezoelectric materials, Piezoelectric actuator types, Control of piezoelectric actuators, Applications of piezoelectric actuators for precise positioning and scanning.

Shape memory alloys (SMA): Properties of shape memory alloys, Shape memory effects, Pseudo-elasticity in SMA, Design of shape memory actuator, selection of materials, Smart actuation and control, Applications of SMA in precision equipments for automobiles, trains and medical devices.

Electro-active polymers (EAPs): Ionic polymer metal composites (IPMC), Conductive polymers, Carbon nanotubes, Dielectric elastomers, Design & control issues for EAP actuators, Applications of EAP for biomimetic, tactile display and medical devices.

Magnetostrictive materials: Basics of magnetic properties of materials, magnetostriction: constitutive equations, types of magnetostrictive materials, Design & control of magnetostrictive actuators, Applications of magnetostrictive materials for active vibration control.

Summary, conclusion and future outlook: Comparative analysis of different smart materials based actuators, Conclusions, Future research trend and applications trends of smart materials and smart

materials based actuator technology.

ME502: Industrial Automation

(3-0-0-6)

Unit 1: Automation: Introduction, automation principles and strategies, basic elements of advanced functions, levels modeling of manufacturing systems.

Unit 2: Material handling: Introduction, material handling systems, principles and design, material transport system: transfer mechanisms automated feed cut of components, performance analysis, uses of various types of handling systems including AGV and its various guiding technologies.

Unit 3: Storage system: Performance, location strategies, conventional storage methods and equipments, automated storage systems. **Unit 4:** Automated manufacturing systems: Components, classification, overview, group technology and cellular manufacturing, parts classification and coding, product flow analysis, cellular manufacturing, application considerations in G.T.

Unit 5: FMS: Introduction, components, application, benefits, planning and implementation, transfer lines and fundamentals of automated production lines, application, analysis of transfer line without internal storage (numerical problems).

Unit 6: Inspection Technology: Introduction, contact and non-contact conventional measuring, gauging technique, CMM, surface measurement, machine vision, other optical inspection techniques, non-contact non-optical inspection technologies versus.

Unit 7: Manufacturing support system: Process planning and concurrent engineering- process planning, CAPP, CE and design for manufacturing, advanced manufacturing planning, production planning and control system, master production schedule, MRP.

Unit 8: Capacity planning, shop floor control, inventory control, MRP-II, J.I.T production systems. lean and agile manufacturing.

ME 512 Mobile Robotics

(3-0-0-6)

Objectives: Mobile robots are now enabling human beings to physically reach and explore uncharted territories in the Universe. Be a place as distant as Mars, in abyssal depths of ocean, or shrouded by thick glaciers of Antarctic, mobile robots help exploring everything; yet this is just the beginning. Even in day to day life autonomous cars hold a potential to revolutionize transportation and domestic mobile robots help humans in cleaning, elderly help, etc. National defense is an area replete with the use of mobile robots. This course will present various aspects of design, fabrication, motion planning, and control of intelligent mobile robotic systems. The focus of the course is distributed equally on the computational aspects and practical implementation issues and thereby leads to a well rounded training. The course will give students an opportunity to design and fabricate a mobile robotic platform and program it to apply learned theoretical concepts in practice as a semester long class project.

Syllabus:

Robot locomotion: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, controllability;

Mobile robot kinematics and dynamics: Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots.

Perception: Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots like global positioning system (GPS), Doppler effect-based sensors, vision based sensors, uncertainty in sensing, filtering;

Localization: Odometric position estimation, belief representation, probabilistic mapping, Markov localization, Bayesian localization, Kalman localization, positioning beacon systems.

Introduction to planning and navigation: path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP);

Robotics Project: Students will work on a semester long project consisting of design, fabrication, and programming a mobile robotic platform.

Texts Books:

1. Melgar, E. R., Diez, C. C., Arduino and Kinect Projects: Design, Build, Blow Their Minds, 2012.
2. R. Siegwart, I. R. Nourbakhsh, "Introduction to Autonomous Mobile Robots", The MIT Press, 2011.
3. Peter Corke, Robotics, Vision and Control: Fundamental Algorithms in MATLAB, Springer Tracts in Advanced Robotics, 2011.

ME541 Turbulent Shear Flows

(3-0-0-6)

Students who may find this course useful: PhD, M. Tech and 3rd/4th-year B. Tech. Students from Mechanical, Civil and Chemical Engineering Departments.

Pre-requisite: ME204 (Fluid Mechanics I) of IIT Patna or an equivalent basic course in Fluid Mechanics

Course Contents:

1. Flow instability and transition to turbulence
2. Nature of turbulence

3. Indicical notation for tensors
4. Fourier transforms and Parseval's theorem
5. Governing equations of turbulence
6. Eulerian Lagrangian and Fourier descriptions of turbulence
7. Statistical description of turbulence (Reynolds-averaged Navier-Stokes and Reynolds stress evolution equations)
8. Kolmogorov's hypotheses
9. Filtered description of turbulence (Bridging methods and large eddy simulation)
10. Boundary layer flow and other important turbulent shear flows (wake, jet, channel flow, etc.)
11. Development of turbulence closure models (Boussinesq approximation and Reynolds-stress evolution equation closures)
12. Rapid distortion theory (RDT) of turbulence

Turbulence processes (Cascade, dissipation, material element deformation, mixing, etc.)

Texts Books:

1. Pope, S. B., Turbulent Flows, Cambridge University Press, 2000.
2. Wilcox, D.C., Turbulence Modeling for CFD, D.C.W. Industries, 3rd Edition, 2006.
3. White, F.M., Viscous Fluid Flow, TATA McGraw Hill, 2011
4. Tennekes, H. and Lumley, J.L., A First Course in Turbulence, The MIT Press, 1972.

ME581 Biomechanics and Biomechatronics

(3-0-0-6)

Introduction to Biological System, Cell, Tissues and Connective Tissues and their Phenomenological Models: Bone, Tendon, Cartilage, Smooth Muscle cells, Growth, Remodeling and Residual Stresses, Circulation system, Neural system and control, Instrumentation Technique, Therapeutic and Prosthetic Devices and Instrumentation, Introduction to Biosensor, Experimental Demonstration, Project evaluation and Guest lecture by Medical Professionals.

Texts Books:

1. Jay D. Humphrey and Sherry DeLange "An Introduction to Biomechanics: Solids and Fluids, Analysis and Design", Springer; 1st Edition Carl-Fredrik Mandenius and Mats Bjorkman "Biomechatronic Design in Biotechnology: A Methodology for Development of Biotechnological Products", Wiley; 1st Edition
2. *Stephen C. Cowin and Jay D. Humphrey* Edt. , "Cardiovascular Soft Tissue Mechanics ", Kluwer Academic Publishers

4. Y.F. **Al-Obaid**, F.N. **Bangash** and T.**Bangash**, "Trauma - An Engineering Analysis" Springer; 1st Edition
5. John G. Webster Edt. "Medical Instrumentation: Application and Design", Wiley; 3rd Edition

ME 554 Rotor Dynamics

(3-0-0-6)

Rotor-Bearing Interaction, Flexural Vibration, Critical Speeds of Shafts, Jeffcott Rotor Model, Unbalance Response, Effect of Damping, Campbell Diagram, Effects of Anisotropic Bearings, Unbalanced Response of an Asymmetric Shaft, Parametric Excitation, Gyroscopic Effects, Rotor with Non-central Disc, Rigid-rotor of Flexible Bearings, Stodola Model, Effect of Spin Speed on Natural

Frequency, Forward and Backward Whirling Motion, Aerodynamic Effects, Instability: Rub, Tangential forces, Rotor-shaft Continuum, Effect of Rotary Inertia and Shear-Deformation within the Shaft, Equivalent Discrete System, Finite Element model for Flexural Vibration, Torsional Vibration, Geared and Branched Systems, Transfer Matrix Model, Fluid Film Bearings: Steady State Characteristics of Bearings, Reynolds's Equation, Oil-Whirl, Rigid And Flexible Rotor Balancing, Active Vibration Control of Rotor-Bearing System: Active Magnetic Bearing, Condition Monitoring of Rotating Machinery, Measurement Techniques. Rolling element bearings, Fault diagnosis.

Texts Books:

1. J. S. Rao, Rotor Dynamics, Third ed., New Age, New Delhi, 1996 (2009 reprint).
2. M. J. Goodwin, Dynamics of Rotor-Bearing Systems, Unwin Hyman, Sydney, 1989.

ME542 Aerodynamics

(3 0 0 6)

Pre-requisites: ME 204, ME 206, ME 305 or equivalent

Review of Fluid Mechanics: Navier-Stokes equations, Potential flows, Concepts of lift and drag, Boundary layer theory, Application of potential flow and boundary layer theory in design of airfoils, Turbulence, Compressible flows, Shock and expansion waves,

Incompressible Flow Applications: Incompressible flow over airfoils: Kutta condition, Kelvin's circulation theorem, Classical thin airfoil theory, Incompressible flow over finite wings: Prandtl's classical lifting line theory, Three-dimensional incompressible flows, Panel methods and numerical techniques, Wind tunnel experimentation, Dynamic stall, Delta wings.

Compressible Flow Applications: Introduction to subsonic compressible flow over airfoils, Supercritical Airfoil, Supersonic flows.

Advanced Applications: Aerodynamics of wing-fuselage system and control surfaces, Helicopters, Aerodynamics of birds/insects, Micro-air vehicle.

Texts and References

1. J. D. Anderson, Fundamentals of Aerodynamics, McGraw-Hill Inc. (Indian Edition), 2005.

ME546 Multiphase Flow and Heat Transfer

(3-0-0-6)

Prerequisites: ME 204 and ME 305, or equivalent

Fundamentals: Introduction to liquid-vapor phase change fundamentals, kinetic theory, interfacial tension, wettability, boiling, nucleate boiling, critical heat flux and dryout mechanisms, transition boiling, Leidenfrost, film boiling, nucleation theory, convective flow boiling fundamentals, flow patterns and regime map, condensation, film-wise condensation vs. dropwise condensation theory. Devices and applications areas: introduction to devices and application areas, boilers and condensers, nuclear reactor, thermosyphons, heat pipes, and vapor chambers. Practical considerations: effect of non-condensable gas and surface aging. Current trends: Heat transfer coefficient enhancement techniques, heat and mass transfer at microscopic length scales and gravity levels, microchannels, modeling techniques

Texts Books:

1. Van Carey. *Liquid-Vapor Phase-Change Phenomena*, Taylor and Francis: 2nd Edition, 2007, ISBN: 0-89116-836-2, and 1-56032-074-5

Reference Books:

1. Incropera and Dewitt. *Fundamentals of Heat and Mass Transfer*, Wiley, 6th Edition, ISBN: [9780471457282](#)
2. Leinhard and Leinhard, *A Heat Transfer Textbook*, Phlogiston Press, 3rd Edition, ISBN: 0-9713835-2-9

ME533 Finite Element Analysis

(3-0-0-6)

Matrix methods review, Rayleigh-Ritz and Galerkin's method, weak formulations, FEM formulation in one dimension, interpolation, Multipoint constraints, applications to solid mechanics, heat transfer and fluid mechanics problems, Solution to truss and frame elements, temperature effect, Euler Bernoulli and Timoshenko beam element, C^0 and C^1 elements, Hermite cubic spline functions, shear locking. Eigen value problem and applications, semidiscrete FEM models, Time approximation schemes, Problems in 2-D, plane stress, plane strain, torsion problems, isoparametric formulations, axisymmetric elements, higher order elements, Serendipity elements, quarterpoint element, hybrid element, numerical intergration, reduced integration, convergence and accuracy, norms, modeling consideration, computer implementation: example problems in different fields: solid mechanics, heat transfer, fluid flow etc. Review of equations of elasticity, velocity pressure formulation, LMM and PM model, Limitations of FEM.
